

Recruitment test

Junior Web Developer

James Sudworth, Head of Digital

24 Feb 2020

1 Introduction

As part of your interview process for the position of **Junior Web Developer** with us at Egress, we would like to get a sense of your technical abilities by having you complete a technical test.

Below is the description of what we'd like from you. If you would like to add things that aren't listed below to showcase your creativity and skills, you are welcome to do so!

We expect this to take around 4 to 6 hours to complete to a competent level, so best of luck!

2 Instructions

Please find attached the design for our planned About Us page.

We would like you to build the front-end code for this webpage (with placeholder graphics if needs be).

Any external libraries that you want to use to achieve the finished build is fine, but we would want you to be able to explain how they work to us.

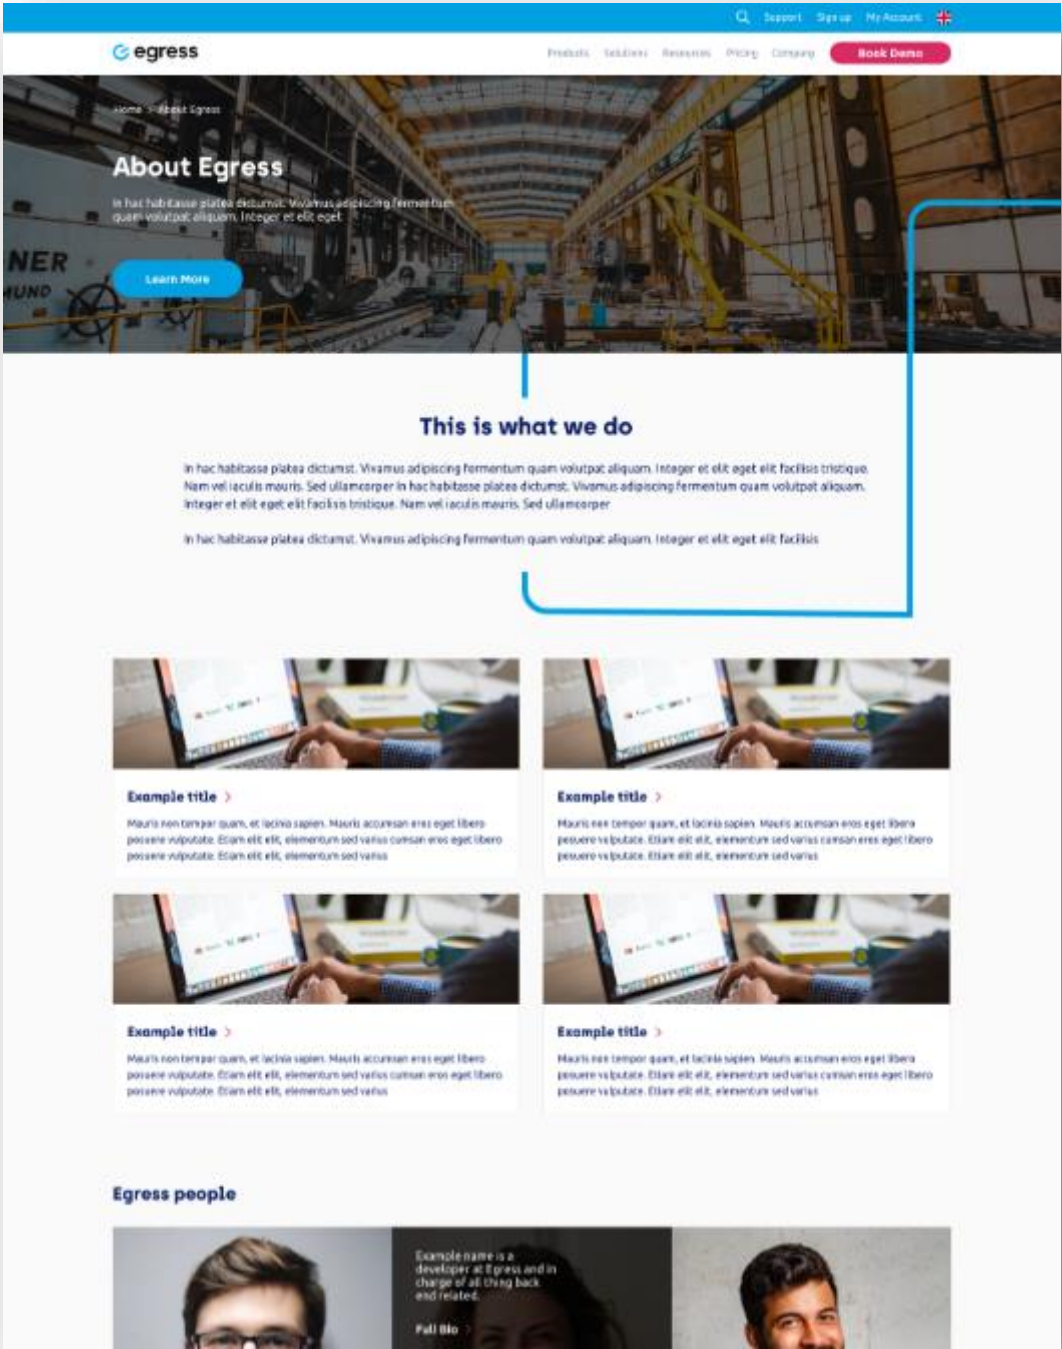

3 Expectations & next steps

We look forward to seeing you demo your completed code.

Some things to bear in mind are:

- How the page looks and functions on a range of displays and devices
- How some of the user interactions on the page might work, on click, on hover, or on touch
- Is there anything you might improve on the page, or suggest as an enhancement?

Let us know when you think you will be able to complete this for us. The sooner you're able to, the sooner we can get you in for the next interview stage 😊

Egress Software Technologies Ltd

Egress provides human layer security – helping users receive, manage and share sensitive data to meet compliance requirements and drive business productivity.

Egress' award-winning platform makes sure emails and files are delivered to the correct recipient, encrypts and protects sensitive data, and provides compliance auditing and reporting.
